## NEUROTECH PLUS: Targeted stimulation to reeducate atrophied muscles and manage pain.

The Neurotech Plus system complements any physical rehabilitation program by combining advanced Neuromuscular Electrical Stimulation (NMES) and Transcutaneous Electrical Nerve Stimulation (TENS) therapies. The system delivers comfortable electrical pulses through the surface of the skin to re-educate muscles with NMES or manage pain through TENS signals.

### About NMES and TENS

NMES is proven by clinical research to be a highly effective therapy for muscle rehabilitation. Neurotech Plus uses NMES to prevent or slow down the atrophy or weakening of muscles often associated with reduced mobility. The device works by triggering muscles to rhythmically contract and relax. This activates the target area to re-educate and overcome disuse atrophy of the muscles over time.

TENS helps your patients manage their pain by sending mild electrical pulses through the surface of the skin to block pain pathways to the brain. Chronic pain sufferers can rely on Neurotech Plus for immediate and long-term drug-free pain relief.

### Pre-set programs target specific conditions.

Neurotech Plus can be used by your patients as an adjunct to their prescribed rehabilitative protocol and allow them to continue recovery even after therapy benefits have been exhausted. The Neurotech Plus has ten pre-set programs to treat all levels of muscle atrophy and target many specific conditions.

#### NMES Indications:

- + Prevention or retardation of disuse atrophy
- + Maintain or increase the range of motion
- + Re-educate muscles
- + Relax muscle spasms
- + Increase local blood circulation

#### TENS Indications:

- + Symptomatic relief and management of chronic, intractable pain
- + Relief of pain associated with arthritis
- + Adjunctive treatment in the management of post-surgical and post-trauma pain

### For use on multiple treatment sites
